- Oracle Customer Advisory Board
- Oracle Cloud Infrastructure Partner-of-the-Year (UK) 2017

Platform-agnostic

- Oracle Public Cloud, Amazon (AWS), Microsoft Azure

Cloud Solutions Tailored to Your Needs

Cloud adoption delivers significant advantages for your organization's agility and bottom line. But the cloud is not a single, one-size-fits-all decision. Adopting a made-to-order cloud environment delivers the greatest gain from these returns:

- Improved Scalability
- Guaranteed Data Recovery
- Better Performance
- Increased Flexibility
- Predictable Monthly Costs and No CapEx
- Elimination of Time-consuming and Disruptive Software Upgrades
- Continuous Innovation

For both infrastructure and applications, you can choose any combination of cloud solutions: private, public (AWS, Oracle, Microsoft Azure), hybrid, and SaaS. To achieve the best outcomes from incorporating multifaceted cloud technology, your plan should be designed in alignment with your organization's needs and objectives — and that means each organization needs to chart its own path to Oracle Cloud — applications, platform, and infrastructure.

Managing Your Cloud Journey

Because cloud adoption is a complex, multistage initiative, IT experts recommend a process that includes formal requirements gathering, cost-to-benefit assessment, and roadmap development before implementation. Best practices for strategic cloud, PaaS, and SaaS adoption also include a commitment to regularly measuring and evaluating against goals and resources.

Planning and implementing multitiered cloud models demands significant expertise. You'll save time and money by relying on experts with experience in the complexity of cloud adoption and who can work alongside your IT staff.

Why Data Intensity?

With more than 150 consultants, Data Intensity can help you define the cloud delivery model that best meets your goals for an automated, self-provisioning, and dynamic infrastructure that scales on demand. We start with an assessment that helps uncover, prioritize, and build a roadmap for migration opportunities that align with your technology and budget goals. Using this roadmap, our teams can help you implement and update your plan throughout your cloud adoption journey.

We are an Oracle Platinum Partner with deep experience with the Oracle Cloud Infrastructure (OCI), Oracle E-Business Suite, and Oracle Cloud Applications as well as Lifecycle Assurance for Oracle Cloud Applications. Our portfolio of services enables you to take advantage of best practices and our experience with more than 200 cloud Application Unlimited migrations (on-premises, private cloud, public cloud).

Oracle Cloud Infrastructure and Public Cloud (OCI/OPC) Services

Services

- Determining the Cloud Options That Make Sense Economically and Strategically
- Creating a Robust Identity and Security Model
- Developing Orchestration Processes for Resource Deployment
- Managing and Right-sizing Resources and Costs
- Integrating OCI and OPC With Other On-premises and Cloud Solutions
- Managing Your OCI/OPC Platform

Data Intensity is Specialized in OCI/OPC, including Infrastructure-as-a-Service, Platform-as-a-Service, Oracle Business Intelligence, and Oracle Integration Cloud. We offer deep infrastructure expertise to help overcome the unique challenges you face in your cloud journey. Our team helps you assess, design, and implement your path to the Oracle Cloud and can provide ongoing support once you get there.

As the only platform-agnostic provider, Data Intensity gives you an unbiased assessment of your best path forward with cloud adoption. Our approach removes the public cloud complexity by tailoring managed and professional services for a wide range of Oracle Cloud Services, including OCI/OPC, Oracle applications, and hybrid solutions. We are the leader in Oracle Specializations and have helped hundreds of organizations build, implement, and support the cloud roadmap that aligns with their business today and into the future.

Oracle Cloud Application Services

Services

- Feasibility, Gap Analysis, and TCO Associated With a Move From On-premises to Cloud Applications
- Implementation of Oracle Cloud Applications
- Integration of Oracle Cloud Applications With Other SaaS and/or On-premises Solutions
- Coexistence Strategy for On-premises Applications Unlimited With Oracle Cloud Applications
- Upgrades of Oracle Cloud Applications
- Development of CEMLI and Custom Applications
- Quick Start Programs

Our consultants provide assessment, implementation, upgrade, and support services for Oracle Financials Cloud, Oracle Procurement Cloud, and Oracle Supply Chain Cloud. Our expertise extends into Oracle Cloud Security, Oracle Cloud Reporting, Oracle Cloud Data, and Oracle Cloud User Experience.

We are the only provider that is platform-agnostic and will give you an assessment of whether a move to the cloud is right for you.

Lifecycle Assurance for Oracle Cloud Applications

Ongoing Management Services to Ensure You Stay Up to Date

- Ongoing Business Process Analysis for New Patches and Releases
- Updates to Training Materials and Documentation
- Maintenance and Execution of Test Scripts
- Management, Break-fix, and Enhancements of CEMLIs

Once your cloud implementation is up and running, Data Intensity can help you manage it efficiently and cost-effectively. One of the most challenging and unanticipated aspects of running SaaS solutions is keeping up with annual upgrades and monthly patching cycles.

Our Functional Service Desk acts as an extension of your team and works directly with users to ensure they are informed of the frequent changes and advances in functionality. By providing an economical way to execute test scripts, update training, develop code, and document business processes, you can focus on strategic goals.

We Can Help You in Your Cloud Journey

To achieve the highest return on investment from the cloud, you need the right resources to help plan and implement your roadmap for your organization's future. Contact Data Intensity for more information about how we can help you develop a strategy and roadmap for moving all or some of your IT applications and systems to the cloud.
