

FUNCTIONAL SERVICE DESK

The priorities of IT teams have moved toward providing innovative and customized services to their user base. IT leaders can support this mission and reduce conflicting demands by contracting with service providers for traditional day-to-day operations. Partnering with a company that offers experience, flexible staffing and technical expertise for managing business-critical applications such as Oracle E-Business Suite (EBS) and Oracle Cloud ensures your ability to meet user demand while keeping your staff's focus on your company's strategic goals for technology-driven advances.

Whether your IT organization is spread too thin or is looking for cost-effective ways to shift staff to new initiatives, Data Intensity's Functional Service Desk can help. We offer:

Expertise

Our technical, functional and developmental expertise in Oracle EBS and Oracle Cloud means your critical Oracle applications meet service-level goals and reduce system downtime.

Reduced Risk and Cost

For the cost of one salaried employee, a dedicated account team with one developer and one functional expert provides 24x7 support and, as your needs change, we can quickly scale to meet new requirements.

Experience

Data Intensity's business analysts, developers and application administration consultants have an average of five years of experience.

How to Deliver a Better User Experience

Improve employee productivity and maximize the value of your applications with Data Intensity Functional Service Desk. Our team consists of highly experienced technical and functional consultants that work as an extension of your internal Oracle support team to provide application-specific expertise at both the user interface and data layers. We have a single point of contact and global coverage, with onshore resources for enhanced communications and offshore support for maximum cost-effectiveness. The teams include:

- Business Analysts who understand overall business flows and module-specific functionality
- Developers who create CEMIs (configurations, extensions, modifications, localizations and integrations), develop new user interfaces and manipulate data
- Application Administrators who manage application user passwords, application security and workflow

The Functional Service Desk operates through a flexible SLA-based service model, with a monthly targeted allotment of hours. Each client has a dedicated Functional Service Desk team overseen by a named account manager and run by a functional liaison. These teams are integrated with both technical and functional professionals for continuity and information sharing across your account.

Benefits you receive with Data Intensity Functional Service Desk

- Improved problem resolution for service requests, daily incidents and tickets
- Faster resolution for critical service requests with escalation paths for your high-priority requests
- Accelerated value from Oracle investments with unmatched proficiency in Enterprise Oracle Technology
- Support for day-to-day operation to keep your IT team focused on the strategic priorities of the business
- Critical business processes monitoring and problem resolution aimed at incident reduction
- Scalable solutions to fit your needs
- End-to-end business flow support

Our customers are our top priority, bar none. Everything we do is based on a CustomerFirst™ methodology and business model that ensures the success and satisfaction of every customer with whom we engage. In addition to our expertise and quality of service, we are committed to driving excellence through:

- **Accountability:** We provide a single point of contact
- **Flexibility:** Everything we do is based on the individual needs of each and every customer. Our model supports your changing needs whether on-premise, managed hosting, managed services, hybrid cloud or cloud.
- **Readiness:** With the around-the-clock needs of our customers in mind, we’ve built a 24x7x365 service model, including monitoring, automated ticketing, reporting and SLAs.
- **Consistency:** We provide you with a dedicated service team that lives and breathes your account as if they were your employees.
- **Oracle proficiency:** Finalize deliverables and present assessment findings, recommended information roadmap and engagement model.
