Today’s digital economy requires companies to rapidly adapt to changes in how their products and services fit demands in their markets. As such, organizations are turning to omnichannel strategies using complex IoT technologies to power their customer experiences.

However, the biggest challenges most are confronting are related to slower time-to-benefit, implementation complexity, run-on costs, and on-going maintenance. Global Payments provides innovative credit card payment solutions for over 2.5 million businesses around the globe to help simplify their operations and provide customer-friendly payment experiences anywhere, anytime, and in any form they choose.

Global Payments has a very diverse set of applications and systems. Connecting those systems was a requirement for the business needs but a challenge for their IT team. Global Payments was facing multiple challenges related to the integration of its critical business systems:

- No Out of the Box Integration for Sub-Ledger Data
- Manual Exchange of Data Between the Systems
- Human Errors and Delayed Reconciliation
- SOX Errors

- Multiple Salesforce Instances Needed to be Integrated Across Different Lines of Business
- Extremely Large Volumes for Master and Transaction Data
- Reduce/Eliminate Integration Noise (Unnecessary Record Updates)

- Limitations and RBAC Concerns in Using Out of the Box Adapter
- Complex HDL Layouts
Global Payments’ Cloud First strategy allowed us to embark and embrace best-in-class Cloud applications for various enterprise functions. Data Intensity with their immense Oracle implementation experience has been our strategic partner since 2011, bringing in both value and quality and in laying our future application roadmap. They have played a quintessential role in realizing our cloud goals by implementing various Oracle Cloud suite of products and by integrating them with our other cloud applications viz. Salesforce, Workday, SAP Ariba, etc., and our homegrown systems using Oracle Integration Cloud.

Global Payments  

As a trusted Managed Services Provider, Data Intensity leveraged Oracle’s unique Integration capabilities by eliminating the barriers between business applications through a combination of machine learning, embedded best-practice guidance, prebuilt integration, and process automation. Data Intensity’s deep Oracle application expertise enabled Global Payments to deliver new business services faster.

Data Intensity played a key role in implementing the various Oracle Cloud suite of products, including Oracle Integration Cloud (OIC). Leveraging multiple application and technology adapters, Data Intensity accelerated the implementation, offering tighter integrations realizing visibility of data across the systems in a seamless way.

Using OIC to integrate the systems removed manual intervention and Global Payments was able to leverage OIC Salesforce adapter and extend it to handle peak loads by piggy-backing on Oracle DBCS and subscribing messages to OIC message queues.

Regarding the Oracle Workday integration, Global Payments was able to adopt a file-based integration approach, and leverage advanced OIC transformation capabilities for transforming data into HDL formats.

"Global Payments’ Cloud First strategy allowed us to embark and embrace best-in-class Cloud applications for various enterprise functions. Data Intensity with their immense Oracle implementation experience has been our strategic partner since 2011, bringing in both value and quality and in laying our future application roadmap. They have played a quintessential role in realizing our cloud goals by implementing various Oracle Cloud suite of products and by integrating them with our other cloud applications viz. Salesforce, Workday, SAP Ariba, etc., and our homegrown systems using Oracle Integration Cloud."

Global Payments
Benefits

After the multiple system integrations that Data Intensity performed, Global Payments was able to accelerate the month-end cycles with significantly less errors, allowing better data accessibility, visibility and coordination between the team to focus on other strategic projects.

- Accelerated Month-End Close Cycles
- Significantly Fewer Errors and Timely Reconciliation
- Allowed Accountants to Focus on more Valued-Added Strategic Projects
- Faster and Reliable Integration Flows
- Better Error Tolerance and Retry Capabilities
- Allowed Best in Class Cloud Systems to Seamlessly Integrate for Visibility of Data
- Replication of Employee Hierarchies for Downstream Accounting Application
- Sync of User Accounts for Integrating with Enterprise’s SSO
- ORACLE ARCS (EPM CLOUD) INTEGRATION WITH ORACLE ERP CLOUD
- SALESFORCE Q2O INTEGRATION WITH ORACLE SCM CLOUD
- ORACLE WORKDAY INTEGRATION

The Data Intensity Difference

As an automation solutions provider, Data Intensity has a track record of delivering continuous improvements to client processes and optimizing system performance through innovative engineering with numerous integration disciplines in a variety of applications. Our depth of experience in specifying, designing, and implementing automation systems for a wide variety of industries enables us to provide leadership and technical support for all phases of your project – from conception through startup.

Data Intensity’s Automation as-a-Service helped Global Payments increase and scaled their automation footprint with a flexible, consumption-based, SaaS-like delivery model. Data Intensity provided unmatched capabilities with comprehensive consulting services that helped the customer automate and optimize their operations and set a solid foundation for their cloud journey.
