

Leading Travel Service Distributor Migrates to Multi-Cloud Solution Seamlessly

“Data Intensity didn’t just help us optimize our solution, they really worked to help us set it up for long-term scalability and sustainability.”

– Lead Program Manager

CASE STUDY

Cloud Services

Engineered Systems Services

Managed Database Services

About the Customer

A world leader in ground travel services offers a broad portfolio of accommodation options and travel services with more than 50,000 suppliers in 185 countries. The company supports its services with a supplier management application that handles reservations, payments and related transactions. This application had outgrown its existing on- premises platform, and the company determined that its needs could best be served by rapidly moving the application, along with its data farm and supporting infrastructure, to the cloud.

Challenges

- Urgent need to migrate mission critical, legacy applications to the cloud due to the maxed-out infrastructure capacity and inability to continue to grow the supplier base.
- Outside experts required since cloud migration was not within internal capabilities.
- The legacy platform served in two regions: Europe and APAC in which different performance considerations were being made and would increase the need for a partner that could handle public and private cloud development.
- The supplier management application needed to be highly available during the migration and the company determined that an extended maintenance window of more than 30 minutes would not be acceptable.

Solutions

- Oracle Management Cloud IaaS & PaaS
- Oracle Database Backup Cloud Service
- Oracle Engineered Systems – Exadata
- Oracle FastConnect, GoldenGate & Corente VPN
- Data Intensity Discovery, Migration & Integration Services

Industry/Customer

Educational Services

Customer Outcomes

- One partner that could handle a customized, cloud solution – a private cloud built on the Exalogic Elastic Cloud Engineered System in APAC and an Oracle Cloud migration in Europe.
- No disruption during application upgrade to the Oracle Cloud.
- In one month, the Oracle public cloud migration in Europe successfully replicated the legacy on- premises solution and did so with higher performance and improved resilience.
- Scalable solution for future growth.
- Gained a trusted partner with broad capabilities to advise the impact of various technical decisions made and ability to train in-house IT team.

Key Partner Takeaways

Data Intensity is the largest independent managed services provider of enterprise databases, applications analytics and the cloud. Connecting technology and business needs, we work with your team to create customized roadmaps for your individual needs. Our expertise in infrastructure and platforms help organizations optimize their software investments and business processes to achieve higher availability, performance, velocity and scalability.
