**USDM Life Sciences**  
888-231-0816  
usdm@usdm.com

Life sciences companies like yours face unprecedented challenges. While markets expand, risks continue to rise amid growing regulatory scrutiny. Globalization, heightened transparency requirements, accelerated cloud-technology emphasis—when combined with ever-evolving supply chain, partner, and customer needs—all force a reexamination of your infrastructure approach to ensure high-quality, compliant operations. Wrong choices can halt your operations, lead to fines, and cause data-integrity harm, data breaches, and loss.

Public cloud affords agility and scalability to your life sciences company operations; often, however, IT departments lack the skill and ability to strategically evaluate and implement the right cloud solutions. More than ever, IT infrastructure—and specifically cloud strategy—materially impacts your business. Fast-tracked digital transformation led by experts is imperative to success in an ever-changing, rapidly adapting business environment and to deliver solid and cost-effective solutions that meet stakeholder expectations.

## Data Intensity

Data Intensity is the largest, independent, global Managed Services Provider and an Oracle, Microsoft, and AWS Partner. We manage complex Oracle Workloads on any cloud, including on leading public clouds. Our Safe-Switch methodology is founded in decades of best-practice, full-stack Oracle expertise. Combined with cutting-edge cloud-migration capabilities, we deliver a laser-sharp determination of the right licensing, cloud, and services to optimize your Oracle Total Cost of Ownership (TCO). A TCO Transformation ("TCOT") Assessment produces a custom workload analysis, licensing position report, cloud architecture mapping, and TCO impact analysis.

## USDM Life Sciences

USDM Life Sciences is a key industry partner with world-class technology software developers. USDM provides strategic and compliant technology solutions that make it easy to accelerate transformation and innovation among device manufacturers, biotech, and pharma, as well as clinical/R&D. USDM Cloud Assurance and Unify Public Cloud (UPC) are USDM's solutions for regulated workloads in the cloud. UPC addresses end-to-end technology and compliance choices for business applications, cloud services, and global infrastructure.
