

CASE STUDY

Financial Services Firm Maximizes Assets, Solidifies Resource and Security Strategies

About the Customer

A financial services firm in Australia employs thousands of staff to meet banking and investment customer needs. Underlying concerns about disaster recovery and growing pressures around PCI and APRA regulations were leading to potential spend that was over and above the existing IT capital expenditure budget.

Client Challenges

- A mixture of off-the-shelf and custom-developed applications created vulnerability in data protection protocols, rippling out to affect confidence in regulatory compliance abilities.
- A classic, multi-vendor environment comprising Oracle Database, RedHat OS, VMware virtualization, Web-Sphere application servers, and a commodity-based hardware platform.

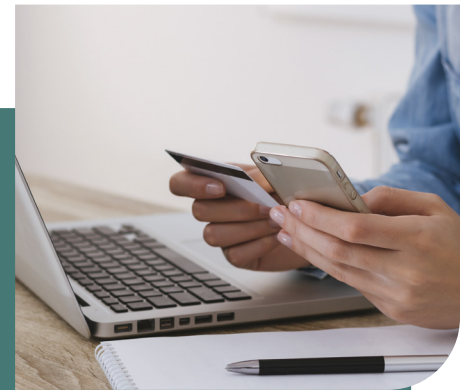

To address these challenges, Data Intensity conducted asset baseline and architectural roadmap services.

Customer Outcomes

- Improved security strategy and environment
- A detailed and more holistic view of expenditures
- A roadmap for optimization, based on true usage, and a plan for limiting exposure
- The ability to make educated decisions on one-, three-, and five-year plans
- \$400,000 annual savings

Customer Quote

"Data Intensity was able to look at our entire environment and assess the total cost of ownership – including our exposure – associated with people, platforms, software, hardware, data centers... everything. This helped us assess if we were able to meet our security and RPO/RTO SLAs. This also enabled us to sweat our existing assets."

"Having the Data Intensity team take a holistic look at our Oracle environment quickly identified weaknesses in our DR and security strategies and gave us options to resolve those weaknesses, while also saving over \$400,000 a year on our existing spend. Thank you to the DI team."

– CIO

About Data Intensity

Data Intensity is an Oracle Strategic MSP and Microsoft Gold partner delivering managed services for the complex lifecycle of Oracle-powered workloads. Offering a complete portfolio under one roof, we provide full-stack, technical, and functional application managed services on any cloud.

Additionally, we maximize and future-proof our clients' Oracle investments through effective license position assessments and cloud-independent migration services. Learn more at www.dataintensity.com.
