Application Assessment Services

As technologies age, the more susceptible they become to underserving the business as they suffer from misconfigurations, overutilization, lack of ownership, and overall lethargy.

The biggest impact will ultimately be lack of trust in the systems, business process inefficiency, and possible security/compliance risk to the business. This is universal across compute/network/storage platforms as well as the mission-critical applications they power. Oftentimes, organizations suffer from skill-set and tooling shortages, impeding their ability to assess and analyze their own technologies in order to truly measure their current state of effectiveness against their desired future state of need.

As technology consumption shifts to cloud-based services, it is all too easy for the consumers of technology to just consume as needed. The challenge with this ubiquitous nature of technology services availability is the missing link in managing those platforms for performance, security, usability, configurability, etc. In most cases, there is too often finger-pointing as to the root cause of issues when identified.

We leverage two decades of real-world experience best practices, as well as industry and proprietary toolsets, to create custom assessments and deliver fast results

Assessment Services We Provide

Data Intensity provides a number of assessment services, such as:

- Oracle EBS Application Performance Health Checks, including upgrade and migration assessments
- Database Performance Health Checks, including baseline security and system configuration assessments
- Oracle Engineered Systems
- Oracle License Management
- Oracle EBS Application Performance Health Checks, including TCO analysis and cloud journey assessments

Benefits

- Process Improvements
- Configuration Improvements
- Security Posture Improvements
- Performance Improvements
- Scalability Improvements
- Cloud Strategy Development
- Additional Professional and Managed Services

- Design Services
- Implementation Services
- Upgrade Services
- Migration Services
- On-Demand Service Management
- Continuous Service Management

About Data Intensity

Data Intensity is an Oracle Strategic MSP partner delivering managed services for the complex lifecycle of Oracle-powered workloads. Offering a complete portfolio under one roof, we provide full-stack, technical, and functional application managed services on any cloud.

Additionally, we maximize and future-proof our clients' Oracle investments through effective license position assessments and cloud-independent migration services. Learn more at **www.dataintensity.com.**
