Oracle License Management

Ensure Oracle license compliance and identify optimization opportunities

Simplify Oracle Licensing

When it comes to software ownership, a vendor's licensing policies, entitlements, and your license inventories can easily get out of control, which is a legal and financial risk to your business.

Enterprise software — particularly Oracle software — is in a completely different class, given its ease of deployment and oft-misunderstood licensing policies.

- Does a Disastery Recovery (DR) environment need its own license? What about development and test servers?
- Can we use Enterprise Edition licenses for Standard Edition Databases?
- Do my licenses have restrictions, and if so, what are they?
- Does 'Full Use' mean it can be used for anything?

These questions are just a sampling of the licensing questions out there. So getting answers, and ensuring Oracle compliance, is vitally important to avoid unnecessary and unbudgeted costs.

> We've helped customers manage over $2 Billion USD in software and hardware assets to ensure proper Oracle licensing compliance and cost optimization over the last 15 years.

Benefit from our Experience

We use both proprietary tools which discover Oracle software assets and our many years of experience in Oracle software licensing and asset management to create a baseline. We also review the customer's processes for deploying and retiring software licenses, and make recommendations on implementing an approach that virtually eliminates license waste. We offer both one-time services and an ongoing Licensing-Management-as-a-Service subscription.

Lower TCO & Faster ROI

We know Oracle licensing inside and out, and leverage our experience to simplify things for you, your team, and your budget. We help clients produce analysis on their total cost of ownership and return on investment to proactively manage and stabilize their license spend.

Got a new project? Acquiring a new company? Let us help you provide the data required to justify spend. Want to charge back licensing to individual departments? We can help.

Oracle–Verified Software Asset Management

Data Intensity is a global partner in Oracle's new Verified Software Asset Management program, an advisory service that has the backing of Oracle, created to foster proactive asset management and optimization. It is intended redefine the Software Asset Management conversation and help customers optimize resources to streamline their Oracle IT environment.

Our recognition as an official VSAM partner indicates Data Intensity is trusted to identify Oracle licensing optimization opportunities. Our clients gain confidential answers on their challenging licensing concerns. Our licensing advisory services, total cost of ownership analysis, and focus on ROI help to proactively manage and stabilize license spend, eliminate licensing waste, and help remediate and mitigate any compliance issues.

At Data Intensity, Software Asset Management means transparency through data accuracy. We document and share:

- Full license inventory outlining specifics within contracts, including restricted and/or limited use clauses, waivers, entity tables, location usage specifics, and any non–standard terms
- Full support inventory, including the ability to outline potential shelfware and associated cost savings, and to provide multi–year support at reduced costs, when compared to Oracle
- Visibility of all data analyzed, including:
  - Detailed outline of all hardware, virtualization and license allocation
  - Identification of technology features that may prompt a 'licensing event'
  - Possible mitigation and/or remediation steps to remove unlicensed features
  - Identification of all E–Business Suite data and mappings
  - Mappings, user details, named details, usage details, and usage set details
  - Possible mitigation and/or remediation steps to end–date users and/or responsibilities to align compliance

The end result? Our clients are back in control of their Oracle assets, and their risk is reduced.

About Data Intensity

Data Intensity is an Oracle Strategic MSP partner delivering managed services for the complex lifecycle of Oracle-powered workloads. Offering a complete portfolio under one roof, we provide full–stack, technical, and functional application managed services on any cloud.

Additionally, we maximize and future–proof our clients' Oracle investments through effective license position assessments & cloud–independent migration services. Learn more at **www.dataintensity.com.**
