

Oracle Engineered Systems

As converged infrastructure systems, Oracle's Engineered Systems offerings bring together database administration, storage management, network management, and general system administration capabilities.

Often, companies do not have the skill set for the implementation, configuration, and ongoing operational care of these systems, or those skill sets are distributed across various job roles. Like today's cloud solutions, Oracle Engineered Systems demand a unique role within the organization that brings together multiple skill sets to ensure an available, highly performing, and secure solution to power your business processes and critical workloads.

Solution Overview

Data Intensity is an award-winning Global Engineered Systems Partner of the Year, holding the Certified Enterprise Installations Standards (EIS) Partner designation as well as Specializations in Exadata, Oracle Database, Oracle VM, Oracle Linux, Oracle Enterprise Manager, and Oracle Cloud Infrastructure. We offer a comprehensive suite of professional and managed services focused on optimizing your investment and ensuring you have a road map for the future. As one of a small handful of global Oracle EIS Partners that are also Oracle Cloud Infrastructure Specialized, we are certified to install and configure Oracle Engineered Systems both on-premises and in the cloud. In addition, Data Intensity offers ongoing managed services to ensure smooth operations, security, performance, scalability, and usability of new functionality.

Unmatched Credentials

Data Intensity has 20+ years of experience installing, maintaining and migrating Oracle systems. We offer comprehensive, full-stack support using a proven design-implement-support methodology.

Professional Services

As a Platinum Partner with Specializations in all aspects of the Oracle Engineered Systems technology stack, Data Intensity offers a wide range of professional services to ensure the fastest time-to-value and optimal investment protection. Whether you are new to the Engineered Systems platform or currently consuming these potent platforms to power your business, Data Intensity can assist anywhere along the life cycle to deliver on your business outcomes.

Precise Architecture Design Services

Our Approach

The Data Intensity difference provides a methodical approach to understand your unique challenges to deliver a solution defined by your operational parameters and timelines. Data Intensity designs and implements Oracle's Engineered Systems for customers with the mentality of full life-cycle supportability.

- Upgrade Services. Timely physical upgrades to ensure the scalability required to meet rigorous business demands.
- Design Services. Mapping use cases to the Engineered Systems platform, as well as HA, DR, storage, security, backup, and resource management for Oracle software implementations.
- Migration Services. Proven migration methodologies and tool sets to migrate applications to on-premises or cloud-based Engineered Systems solutions.
- Configuration Services. Installations, upgrades, systems activation, as well as testing of database, middleware, and application software.

Remote-Managed Engineered Systems

Understanding the unique needs of each customer, Data Intensity tailors the level of remote management services to ensure cost optimization and investment protection. The service can range from just patching the underlying Engineered Systems infrastructure to managing whole applications to disk environment encompassing operating system, database, middleware, and application layers.

- Remote Monitoring Services. As a complement to or replacement of the Oracle Platinum services, Data Intensity can augment your staff needs and drive faster time-to-benefit mapped to your business processes
- Health-Check Services. Identify critical patch levels, performance metrics, and tuning recommendations
- Operations Management. Execute tuning recommendations for optimal performance.
- Patch Services. Maintaining the power of the Exastack converged infrastructure requires expertise and knowledge to ensure performance, functionality, and security compliance.

About Data Intensity

Data Intensity is an Oracle Strategic MSP partner delivering managed services for the complex lifecycle of Oracle-powered workloads. Offering a complete portfolio under one roof, we provide full-stack, technical, and functional application managed services on any cloud.

Additionally, we maximize and future-proof our clients' Oracle investments through effective license position assessments and cloud-independent migration services. Learn more at www.dataintensity.com.
