

# SaaS Migration Jumpstart

Quickly Determine if You're Ready for SaaS

As IT leaders face increasing pressure to modernize infrastructure and reduce operational complexity, Software-as-a-Service (SaaS) solutions offer a compelling path forward. But the journey to SaaS isn't always straightforward, and for many, it's uncharted territory.

## Introducing the SaaS Migration Jumpstart

Our SaaS Migration Jumpstart is a focused, four-to-six-week engagement designed to help you make informed, confident decisions—without committing to a full migration.

Led by Data Intensity's seasoned experts in cloud architecture, implementation, and optimization, this program gives you a practical, low-risk way to evaluate your organization's readiness and explore what SaaS could look like for your business.

## A Structured Approach to SaaS Readiness

### 1. Readiness Questionnaire

You'll begin with a self-guided assessment that evaluates your current environment, business processes, and strategic goals. We score your responses to determine your organization's SaaS readiness.

### 2. Hands-On Sandbox Experience

If your organization is a good candidate for SaaS, we'll configure a personalized Oracle SaaS sandbox within 48 hours. Your team will have two weeks to explore the environment, test key processes, and see firsthand how SaaS could support your operations.

### 3. Expert Review & Recommendation

After the sandbox period, we'll gather your feedback and provide a clear, tailored recommendation. If the fit is right, we'll guide you toward a transition prototype. If not, you'll walk away with valuable insights—no pressure, no obligation.

### 4. Move Forward with Confidence—or Stay the Course

If you decide to proceed, we'll promote the sandbox and our experts will launch a formal SaaS migration project. If you determine that SaaS isn't the right path at this time, or if the readiness assessment suggests more preparation is needed, you can continue investing in your current ERP strategy with clarity and confidence.

Data Intensity is the trusted partner you want by your side when evaluating a move to SaaS. With deep Oracle expertise and a practical approach, Data Intensity and the SaaS Migration Jumpstart will help you understand your options and what they mean for your organization. Get the clarity, confidence, and metrics you need to make the right decision—whether that means moving forward or staying the course.

## About Data Intensity

Data Intensity is a strategic Oracle partner delivering managed services for the complex lifecycle of Oracle-powered workloads. Offering a complete portfolio, we provide full-stack technical and functional application managed services on any cloud.

Whether you seek managed services for your existing E-Business Suite, Hyperion, Peoplesoft, or JDE apps; need Oracle software asset management and effective license position assessments; desire cloud consulting services; need help migrating to the public cloud; are considering a move to Oracle Fusion Cloud; or looking to delve into AI and ML technologies, Data Intensity is the trusted partner you need to help future-proof your Oracle investments.
