DATA INTENSITY

Fusion Analytics Optimization & Enablement

Turn Fusion Cloud Apps Data into Insights

Oracle Fusion Data Intelligence (FDI) gives organizations a powerful analytics foundation with prebuilt data pipelines, models, and dashboards. But getting from implementation to trusted, useful analytics often requires additional expertise.

Data Intensity helps you make that last mile count.

Whether you need support getting started, help solving a specific analytics challenge, or ongoing expertise to extend what you already have, our Fusion Cloud and Analytics experts help you turn data into insights your business can use and act upon.

Make Fusion Analytics Work Harder for Your Business

- **Configure analytics around your business.** Tailor subject areas, datasets, reports, and dashboards to answer the questions your teams actually ask.
- **Build and extend reporting.** Address reporting gaps and complex requirements with custom datasets, enriched data, advanced logic, and analytics that span multiple subject areas.
- Bring more data into the picture. Extend your analytics with additional Fusion and non-Fusion data to create a more complete view across the business.
- **Build trust in your data.** Validate and reconcile data, troubleshoot discrepancies, and give users greater confidence in the information behind their decisions.
- **Improve performance and usability.** Tune analytics, optimize refresh requirements, troubleshoot access issues, and help resolve the day-to-day challenges that can slow adoption.
- **Enable your people.** Give business and IT teams the training, documentation, and hands-on guidance they need to use, maintain, and extend analytics with confidence.

From Implementation to Adoption and Beyond

Your analytics needs will likely change as your business evolves. Data Intensity can support an initial implementation or optimization effort, step in to solve a specific reporting challenge, or provide ongoing expertise as new requirements emerge.

Not getting everything you need from your Oracle Fusion data?
We turn data into insights you can use. Let's talk.

OTBI or FDI? Start With What You Need.

Not every analytics requirement calls for the same solution. Data Intensity can help evaluate whether OTBI is sufficient for a particular use case or whether FDI is better suited to provide the capabilities, scalability, and flexibility your business needs.

About Data Intensity

Data Intensity helps clients maximize the value of their Oracle and enterprise technology investments through managed services, cloud solutions, modernization, optimization, and advisory services that help reduce complexity, improve performance, and enable smarter technology decisions.
